

SPLIT LIMB BRACKETS INSTRUCTIONS

BRACKET PLACEMENT FOR FULL SPLIT LIMB BOWS

1. Lay the bow on a flat surface with the string facing toward you. Tentatively position the Quad Limb Brackets at the end of each limb. On bows with large cams the Brackets will need to be placed between the string and cables (**Figure 5 & 6**). On bows with small cams or wheels the Brackets may need to be placed outside of the string (**Figure 7**).

Figure 7

2. Lay the Bowmaster Portable Bow Press alongside the bow and adjust to length (steps 2 and 3 of the Bowmaster instructions) between the Quad Limb Brackets.
3. Slide the Bowmaster cable ends into the slots of the Quad Limb Brackets and turn the jackscrew just enough to take the slack out of the cable which will hold the Brackets in place.
4. Pick the bow up and if necessary readjust the brackets so that they are centered on each limb tip.
5. Continue by following the [Bowmaster Portable Bow Press instructions](#) starting at step 6.
